Special Features

- Automatic notification of content changes sent to localization teams
- Easy-to-export content for translation based on site, page, and date
- In-country review teams can make edits without sending or posting files
- Your choice of editing techniques for each site — edit live or put comments in a staging area for review
- One centralized web content management strategy
- Easy to use — everyone can get up to speed quickly

Software and platform compatibility

Because of its popularity and powerful tool set, we chose Microsoft asp.net for the current development platform. This technology was developed with ASP.NET, AJAX, C#, SQL Server 2005 (backward compatible to SQL 2000 and forward compatible with SQL 2008).
